K-Vest Golf Swing Analysis

Have you tried "almost everything" to fix your game and are still asking yourself these questions?

Why am I coming over the top?

How do I get rid of this slice?

Why are my drives lacking distance?

Why is my ball flight so inconsistent?

Can I ever stop popping pain relievers before I play?

The Answers Might Surprise You.

K-VEST uses 3 wireless sensors, located on your hips, shoulders, and golf glove to more effectively diagnose the true cause of accuracy and distance issues. Once a swing has been captured, a certified professional can analyze and communicate your swing efficiency or "power signature" to you. In other words, the system analyzes the specific areas of your address, backswing or downswing that are holding you back.

The best part of the K-VEST experience is that your professional can then provide you with real-time visual and auditory feedback to reinforce correct movements. This feedback accelerates the learning process to get you playing better-in less time. This process builds repeatable skills and lasting

results.

If you are interested in fixing the true problems in your swing, K-VEST has an established network of certified professionals that can help you increase distance, improve accuracy, and most importantly, lower your scores!

K-VEST has emerged as the industry leader in golf performance training, contributing to the evolution of biofeedback to improve motor skill development.

K-VEST's visual and auditory biofeedback provides golfers with immediate analysis of the accuracy of their movements. For example, when a player is in the desired position, they will see their 3D animation turn green while music plays in the background. As soon as they move out of the desired settings, the animation will turn red and the music will stop, providing the golfer with instant, real-time feedback. This feature accelerates motor learning and virtually eliminates communication barriers between the professional and the golfer.

The K-VEST software includes a single-camera, video analysis solution allowing professionals to simultaneously capture 2D video and 3D motion, all within the same software application. With easy-to-use drawing tools, video comparison mode, and voice-over to web services, K-VEST video analysis completes the all-in-one solution for professionals.
